CERTIFICATION PROGRAM BULLETIN

New Certification Release Launched

Today the NFC Forum announces the launch of Certification Release 10.

[Certification Release 10](#) provides support for functionality introduced in Analog Technical Specification 2.0. This is the result of an extensive collaborative alignment effort with GSMA, CEN, ISO and global Public Transport stakeholders to harmonize technical requirements, thereby assuring improved interoperability of NFC Forum devices across the industry.

The NFC Forum has been working with vendors to incorporate the changes into the approved test tools, as well as with the [Authorized Test Laboratories](#) to implement the changes in the Certification testing infrastructure.

The test case changes have been validated in the [Approved Test Tools](#), and the [Test Case Categories List \(TCCL\)](#) has been updated. The test cases introduced by Certification Release 10 are now active for use in certification testing.

Certification Release 10 related [documents](#) may be viewed on the NFC Forum members' website.

Please contact certification@nfc-forum.org should you have any questions.

Thank you,
NFC Forum Compliance Committee
