

DON'T TOUCH THAT!

Secure, Contactless Payments With Your Mobile Phone

The digital wallet already in your smartphone makes purchasing goods safer for everyone by avoiding touching cash or keypads. Just Tap and Pay.

NFC technology, along with Bluetooth and Wi-Fi, are one of the big three consumer technologies and the only one that's in the palm of your hand.

90% of smartphone owners use their device while shopping, why not pay with it too?

9 out of the 10 best-selling smartphones are NFC-enabled

Most of the three billion smartphones in the world have NFC as a standard feature.

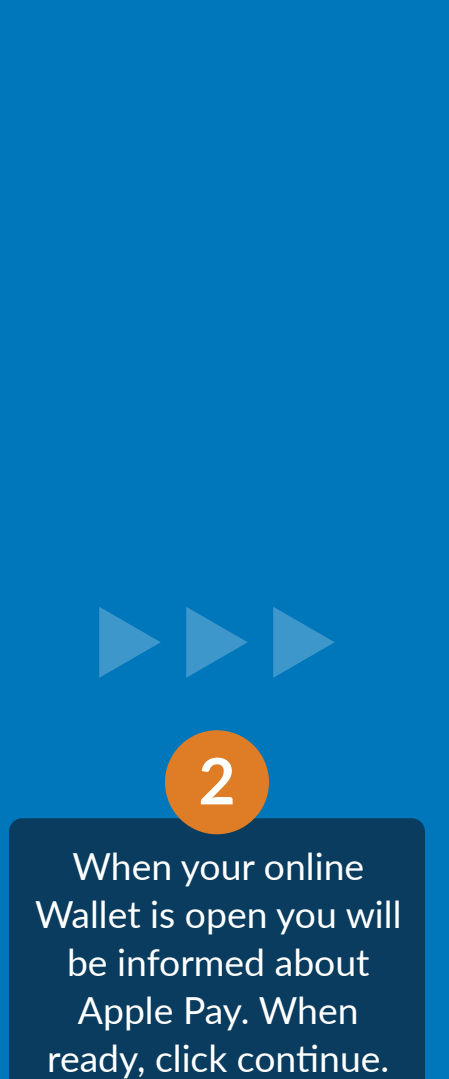

Contactless payments are simple, fast, and secure

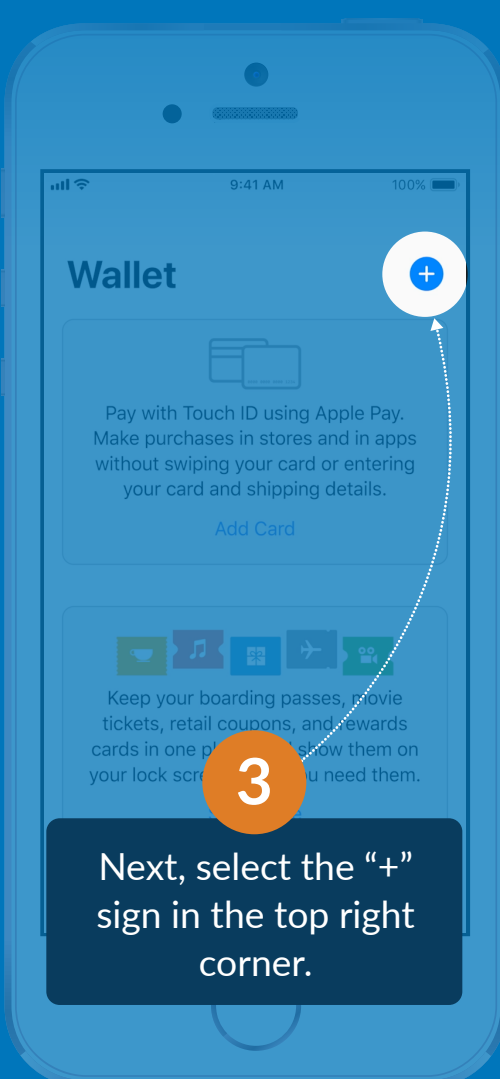

To add a credit card to your Apple iOS device:

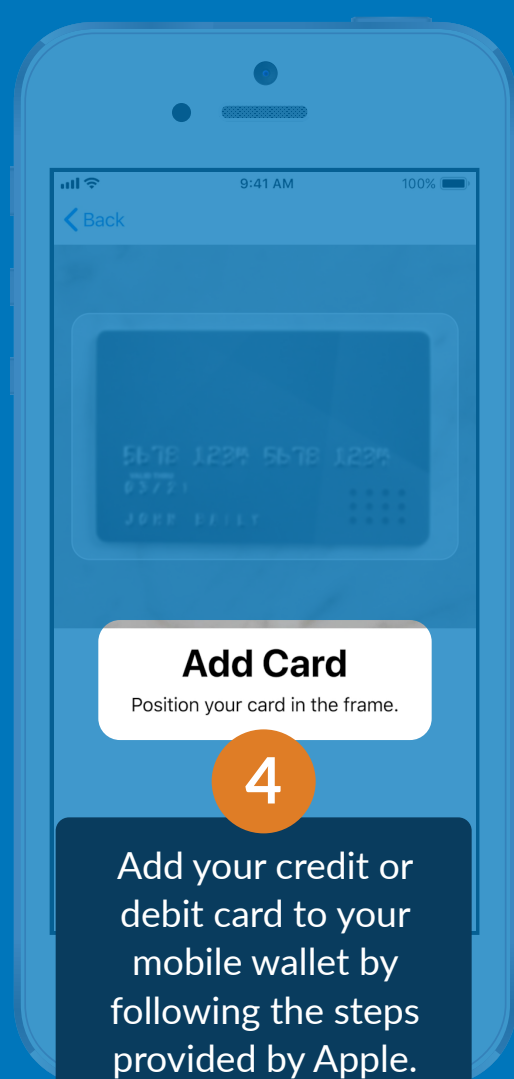

Open your iOS device and search for your Wallet application.

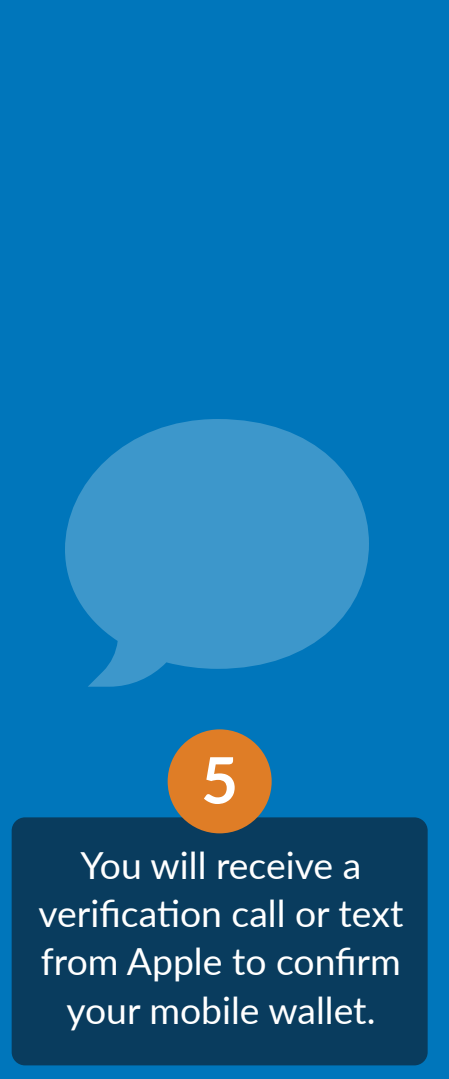

When your online Wallet is open you will be informed about Apple Pay. When ready, click continue.

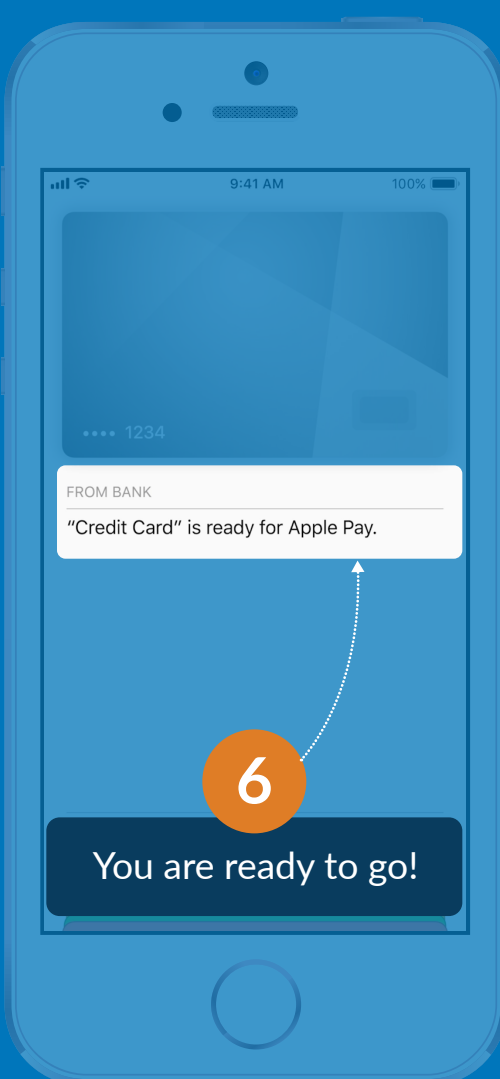

Next, select the "+" sign in the top right corner.

Add your credit or debit card to your mobile wallet by following the steps provided by Apple.

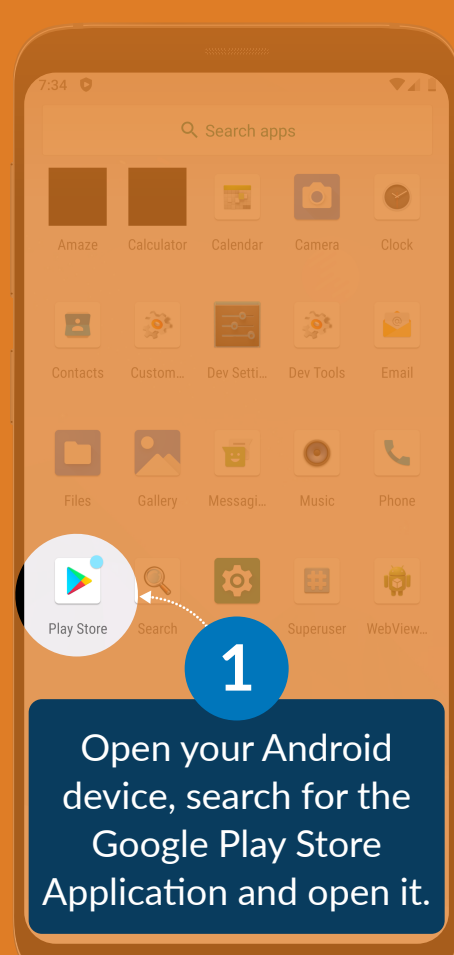

You will receive a verification call or text from Apple to confirm your mobile wallet.

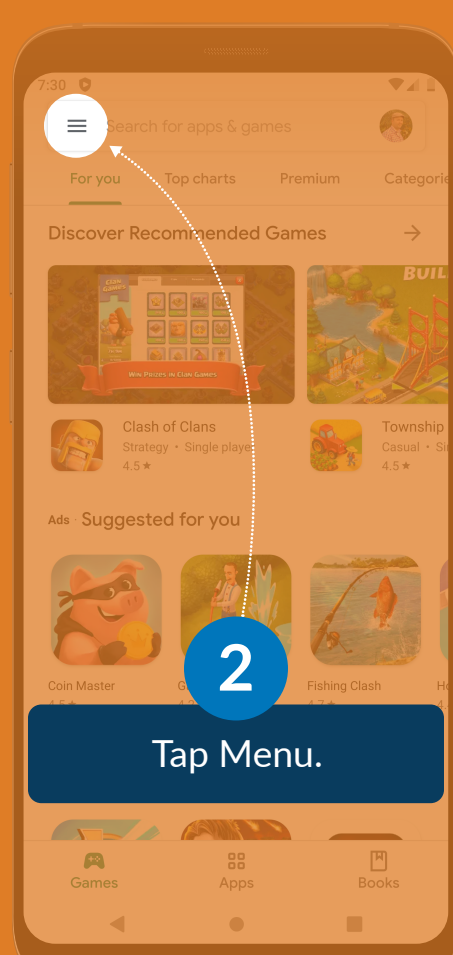

You are ready to go!

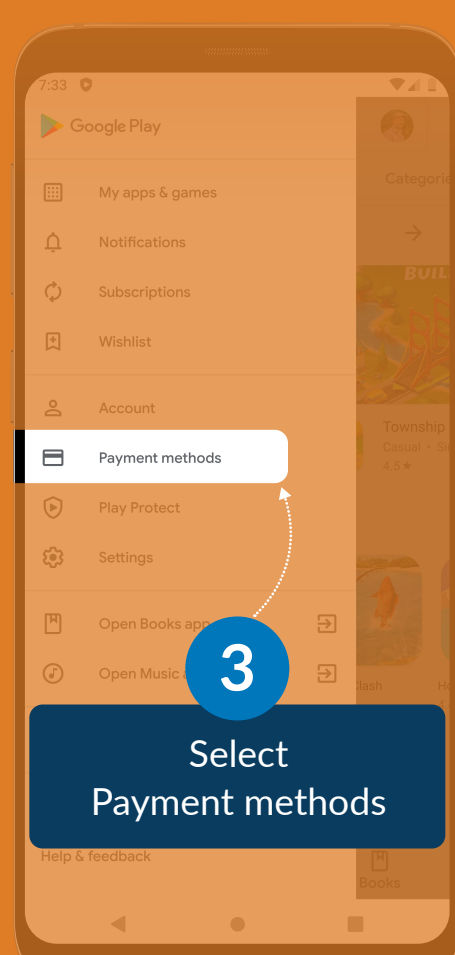

To add a credit card to your Android device:

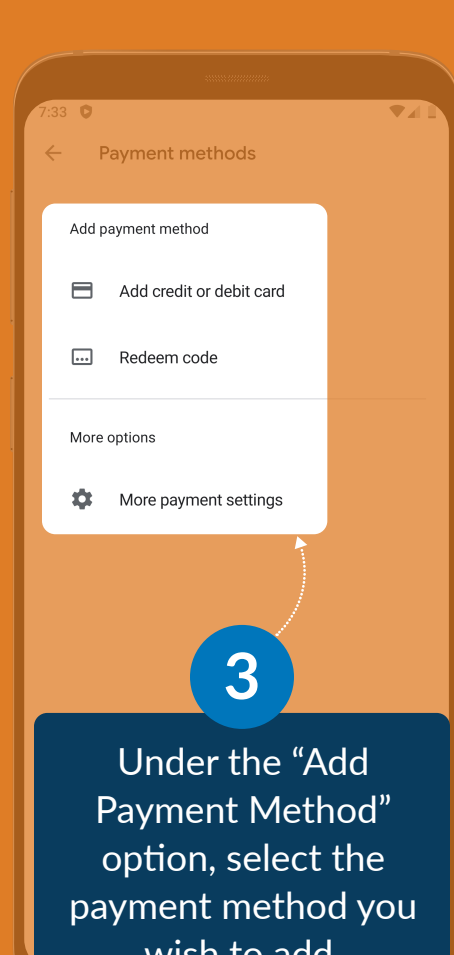

Open your Android device, search for the Google Play Store Application and open it.

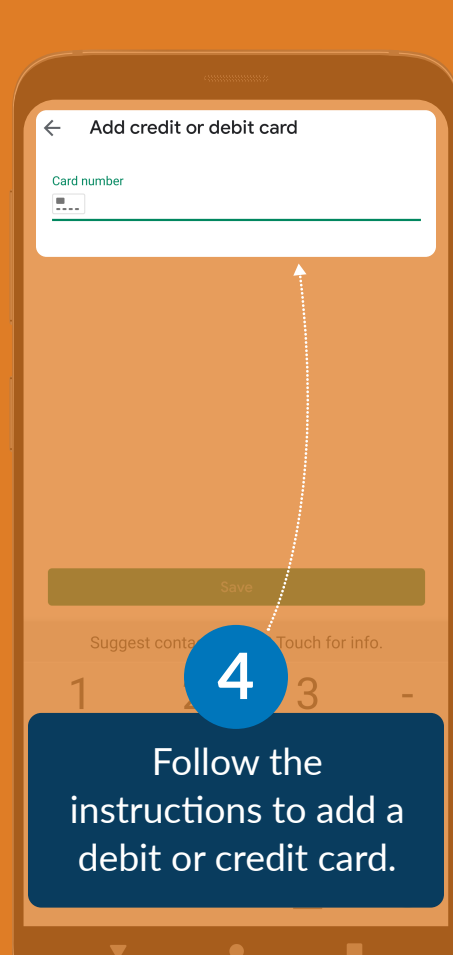

Tap Menu.

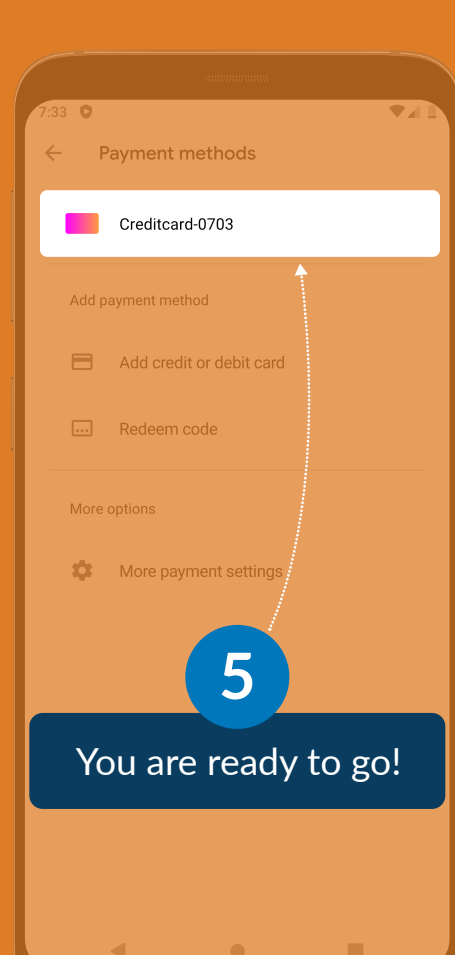

Select Payment methods

Under the "Add Payment Method" option, select the payment method you wish to add.

Follow the instructions to add a debit or credit card.

You are ready to go!
